

TRUSTED INDUSTRY LEADER LAUNCHES REVOLUTIONARY TELEMETRY PRODUCT

Charleston, SC, November 4, 2015 - Sage Services Group, a leading provider of medical patient monitoring services, parts, and accessories, has launched a new innovative product, the **guardian**. The **guardian** is a custom fit case designed to protect telemetry transmitters from everyday wear and tear. Company President and Founder, Joe Harper, explains *"earlier this year, our team started looking for ideas to protect transmitters because of the number of devices we received at our facility for service that were dropped or mishandled."* The idea is quite simple...Why not protect telemetry units the way smart phones are protected? Ultimately, these cases are easily cleaned, durable for repeated use, and are designed to protect.

Telemetry transmitters are a vital tool in medical facilities nationwide. This equipment is essential to the hospital staff to monitor patients wirelessly. When telemetry devices are damaged, the units are out-of-service to be repaired and the hospital incurs additional expenses to have them fixed. Harper adds, *"Our team is excited to launch the **guardian** and partner with our customers in an effort to reduce unnecessary repairs and keep these critical telemetry devices in service where they belong."*

The guardian comes in 12 different models custom fit for specific transmitters. This custom fit, single piece construction ensures the transmitter is protected. An internal shock absorbing frame provides longer durability of the unit. The case is simple to clean and disinfect, and its coating is lint and dust free.

Tired of costly telemetry transmitter repairs? Sage Services Group has the solution!

Guard your investment with the guardian.
